# Asset #GF02(NSTM) MINNESOTA AVE over RED RIVER OF THE NORTH Location: MINNESOTA AVE-GRAND FORKS

#### Inspection Date: 10/27/2022

IDENTIFICA	TION
(1) State Names	38 - North Dakota
(8) Structure Number	GF02
(5) Inventory Route	
(2) Highway Agency District	6 - Grand Forks
(3) County Code	18 - Gr. Forks
(4) Place Code	32060
(6) Features Intersected	RED RIVER OF THE NORTH
(7) Facility Carried	MINNESOTA AVE
(9) Location	MINNESOTA AVE-GRAND
	FORKS
(11) Mile Point	0.3 mi
(12) Base Highway Network	No
(13) LRS Inventory Rte & Subrte	
(16) Latitude	47.921794444444
(17) Longitude	-97.0209888888888
(98) Border Bridge State Code	27
(99) Border Bridge Structure No.	60506
STRUCTURE TYPE A	
(43) Main Structure Type	32
Material	3 - Steel
Туре	2 - Stringer/Multi-beam or girder
(44) Approach Structure Type	32
Material	3 - Steel
Туре	2 - Stringer/Multi-beam or girder
(45) No. of Spans in Main Unit	
	2
(46) No. of Approach Spans	
(107) Deck Structure Type	1 - Concrete Cast-in-Place
(108) Wearing Surface/Protective System	
Type of Wearing Surface	4 - Low slump Concrete
Type of Membrane	0 - None
Type of Deck Protection	0 - None
AGE AND SE	
(27) Year Built	1967
(106) Year Reconstructed	
(42) Type of Service	15
On	1 - Highway
Under	5 - Waterway
(28) Lane	
On	2
Under	0
(29) Average Daily Traffic	5200
(30) Year of ADT	2019

#### **General Observation**

8/27/2007 - Section loss to webs drain areas est approx 1/4" in spans 4, 5, 6 S. fascia span 1 & 2 N. Fascia. NBI Remarks: Installed trough drain screens at strip seal and expansion joints, joint cover plates repaired, deck drain extensions installed, treated pack rust areas, installed new guardrail and lighting system and repainted all structural steel in 2006. Riprap added around pier 9 in 2006. Spalling and horizontal cracking at the NE corner of the east abutment. Channel bank erosion both banks up and downstream. Pack rust areas on the south end of the upper bent connections at bents 11, 12 and 13 have been treated and repainted in 2006. 12/2019 - Rusting to Pack Rust Areas on Bent Piers 11, 12, 13. Both columns at bent 13 lean in 1 3/4" in 4' measured on the south side. 12/2019 - No change in Lean. Second girder from the south sits on the adjacent girder seat between 3" - 4" at the expansion joint on the east side of pier #9. Some deck spalling near expansion joints throughout the deck. Minor areas of rust to bare metal on beams & column base plates. Alligator cracking with some seepage/spalling south side abutment wing wall.

3/2018 - Bridge Division modified Ratings to match MnDOT per FHWA directive

Inspection incomplete in November due to the completion of the 2019 October County Structures.

Inspection completed 12/11/2019. - 12/11/2019

3/6/2020: Bridge Division modified NBI ratings (058, 059, 060, 061, 062, 071, 072) to match MnDOT NBI ratings from 10-17-2018 inspection KAL.

08/2020: Underwater inspection by MnDOT.

10/28/2020: Routine inspection by MnDOT.

Historical Notes:

Alert Code 1: Approximately 1/16" of section loss to the last 2" of beam ends to the bottom flange at both abutments 4' to 6' of strip seal failure at pier 8 & bent 2.One bolt missing on the inside north bearing plate east abutment. 11/22/2017 - Tree growth under structure in Spans 4, 10, 11, and around Bent Pier 5. See Photo. Tree Drift resting on middle Horizontal Brace at Bent Pier 10. See Photo. - 12/11/2019

Alert Code 2: Lower horizontal braces at bents 4, 5 & 6 have approximately 1/8" to 1/4" of section loss approximately 10' in length on bent #5 and approximately 40' on bent #6. Up to 1/4" section loss to the lower portion of web on the south outside girders in spans 4, 5 & 6. Similar section loss to the lower portion of web to the north outside girders in spans 1 & 2 at drain locations. Simaler section loss to lower portion of webs south outside girder span 13. See Photo. Pack Rust to Steel Columns Connection to Steep Cap. Bent Pier 11 with 3 Connection Plates (2 South, 1 in from the South), Bent Pier 13 with 2 Connection Plates (2 South end). See Photo. - 12/11/2019

**36B - Transitions** (1 - Inspected feature meets currently acceptable standards.\*) 10/28/20: East side of bridge has guard rail West side not required.

**36C - Approach Guardrail** (1 - Inspected feature meets currently acceptable standards.\*)

10/28/20: East side of bridge has guard rail West side not required.

**58 - Deck** (5 - FAIR CONDITION - all primary structural elements are sound but may have minor section loss, cracking, spalling or scour.)

10-17-18 The underside of the deck at approach relief joints has a lot of corrosion, causing concrete to spall away. On wearing

surface numerous small cracks, some open spalls. Some of the spalls have been patched with bit.

10-28-20 Spalls have been patched with bit.

10-27-22 Spalls and exposed rebar on curbs and sidewalks. Lowered rating to a 5.

59 - Superstructure (6 - SATISFACTORY CONDITION - structural elements show some minor deterioration.)

10-17-18 Beams - 2 SF area of delamination at SE beam corner. Remainder in good condition. Bearings have some rust forming, overall good condition.

10-28-20 No significant changes noted

10-27-22 No significant changes but more rust and surface changes lowered to 6

**60 - Substructure** (5 - FAIR CONDITION - all primary structural elements are sound but may have minor section loss, cracking, spalling or scour.)

10-17-18 Steel columns - S. end, rust is forming at tops of some piles where they meet caps. From E. to W., first 6 then the

8th steel column. some other areas of corrosion beginning.

Conc columns & pier walls - Good overall condition. Remainder of elements in good condition.

Abuts - Have numerous cracks & spalling at both ends. Some are getting large. Down rated element to 6.

10-28-20 No significant changes noted.

[2020] Underwater Inspection: NBI has been reviewed and confirmed with the underwater portion of bridge inspected. 10-27-22 Steel columns forming pack rust between caps and with section loss in some of the members. Lowered rating to 5

**61 - Channel/Channel Protection** (5 - Bank protection is being eroded. River control devices and/or embankment have major damage. Trees and brush restrict the channel.)

10-17-18 W. river bank, no riprap, appears to be vegetated & stable. 12" dia. tree trunk behind steel column, 4th from W. E.

abut. slope is dirt only, no erosion. At NW cor. of pier 3 from W. ,erosion gully 3' x 2' x 20'. A lot of small trees & brush on W.

slope, should be cleared away.

10-28-20 West side trees and brush need to be removed, as they are starting to interfere with bridge elements.

[2020] Underwater Inspection: Accumulations of timber debris were observed around the substructure units. The west shoreline exhibited heavy erosion. The east shoreline exhibited minor erosion.

10-27-22 based on underwater inspection lowered rating to 5 due to erosion of the bank

**72 - Approach Roadway Alignment** (5 - Somewhat better than minimum adequacy to tolerate being left in place as is) 10/28/20: Bridge is curved, with the roadway not allowing drivers line of sight when west bound.

**113 - Scour Critical Bridges** (8 - Bridge foundations determined to be stable for the assessed or calculated scour condition. Scour is determined to be above top of footing (Example A) by assessment (i.e., bridge foundations are on rock formations that have been determined to resist scour within the service life of the bridge4), by calculation or by installation of properly designed countermeasures (see HEC 23).)

08/2020 (UW): No scour was observed at the submerged portions of substructure units or within the channel.

#### A-19 - Actual Posting Tons (40)

10/28/20: Load rating signs installed both ends R12-5a sign with 40 ton rating.

#### **Significant Findings**

**Critical Finding**
